SECTION 1 SAFETY NOTES

1-1. Warnings and Caution	1-2. Caution Handling of LCD Panel
 These servicing instructions are for use by qualified service personnel only. To reduce the risk of electric shock, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so. 	When repairing the LCD Panel, make sure you are grounded with a wrist band. When repairing the LCD Panel on the wall, the panel must be secured using the 4 mounting holes on the rear cover.
3) An isolation transformer should be used during any service to avoid	1) Do not press the panel or frame edge to avoid the risk of electric shock.
Possible shock hazard, because of live chassis. The chassis of this receiver is	2) Do not scratch or press on the panel with any sharp objects.
directly connected to the ac power line.4) Be sure to follow these guidelines to protect your property and	3) Do not leave the module in high temperature or in areas of high humidity for an extended period of time.
Carry the TV with an adequate number of people: larger size TVs require	4) Do not expose the LCD panel to direct sunlight.
two or more people.	5) Avoid contact with water. It may cause short circuit within the module.
 Correct hand placement while carrying the TV is very important for 	6) Disconnect the AC power when replacing the backlight (CCFL) or
safety and to avoid damages.	inverter circuit. (High voltage occurs at the inverter circuit at 650Vrms)
5) Components identified by shading and mark on the exploded views,	7) Always clean the LCD panel with a soft cloth material.
components with Sony parts whose part numbers appear as shown in this	8) Use care when handling the wires or connectors of the inverter circuit.
manual or in supplements published by Sony. Circuit adjustments that are	Damaging the wires may cause a short circuit.
critical for safe operation are identified in this manual. Follow these	9) Protect the panel from ESD to avoid damaging the electronic circuit (C-MOS).
procedures whenever critical components are replaced or improper operation is suspected.	10) During the repair, DO NOT leave the Power On or Burn-in period for more than 1 hour while the TV is face down on a cloth.
	>1 hour

Figure 1. TV is faced down on a cloth during repair.

1-3. Caution About the Lithium Battery

1) Danger of explosion if battery is incorrectly replaced. Replace only with

the same or equivalent type.

2) Outer case broken battery should not contact to water.

1-4. Safety Check-Out

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:-

1) Check the area of your repair for unsoldered or poorly soldered

connections. Check the entire board surface for solder splashes and bridges.

2) Check the inter board wiring to ensure that no wires are pinched or

contact high-wattage resistors.

3)Check all control knobs, shields, covers, ground straps and mounting hardware have been replaced. Be absolutely certain you have replaced all the insulators.

4) Look for unauthorized replacement parts, particularly transistors that were installed during a previous repair. Point them out to the customer and

recommend their replacement.

5) Look for parts which, though functioning show obvious signs of deterioration. Point them out to the customer and recommend their replacement.

6) Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.

7) Check the antenna terminals, metal trim, metalized knobs, screws and all other exposed metal parts for AC leakage. Check leakage test as described next.

8. For safety reasons, repairing the Power board and/or Inverter board is prohibited.

1-5.Leakage Test

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis must not exceed 0.5mA (500 microamperes).

Leakage current can be measured by any one of the three methods:-

1) A commercial leakage tester such as the SIMPSON 229 or RCA WT540A. Follow the manufacturers instructions to use those instructions.

2) A battery-operated AC milliampmeter The DATA PRECISION 245 digital multimeter is suitable for this job.

3) Measuring the voltage drop across a resistor by means of a VOM or battery operated AC voltmeter. The 'limit' indication is 0.75V so analog meters must have an accurate low voltage scale. The SIMPSON'S 250 and SANWA SH-63TRD are examples of passive VOMs that are suitable. Nearly all battery operated digital multimeter that have a 2 VAC range are suitable. (see Figure 2.)

Figure 2. AC voltmeter to check AC leakage

1-6. How to Find a Good Earth Ground

1) A cold-water pipe is a guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground.

2) If the retaining screw is to be used as your earth ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms.

3) If a cold-water pipe is not accessible, connect a 60- to 100-watt troublelight (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side on the line; the lamp should light at normal brilliance if the screw is at ground potential (see Figure 3).

Figure 3. Checking for earth ground.

1-7. Lead Free Information

The circuit boards used in these models have been processed using Lead Free Solder. The boards are identified by the LF logo located close to the board designation.

Figure 4: LF Logo

Figure 5: LF logo on circuit board

The servicing of these boards requires special precautions. It is strongly recommended to use Lead Free Solder material in order to guarantee optimal quality of new solder joints.

1-8. Handling the FLEXIBLE FLAT CABLE (FFC)

• When you insert / pull out FFC, please grasp a reinforcement board and main body of FFC.

Please hold reinforcement board and plunge it to depths.

Please pull out FFC while pushing the button of both ends at the same time.

< Insertion>

<Pull out>

FFC connector broken if pull out FFC without press and hold both Release Button of CN8001. Symptom 5X blinking will be appear due to improperly seated.

SECTION 4 SERVICE ADJUSTMENTS

4-1. Accessing Service Mode

1.

2.

- 1) Go to TV standby condition by remote commander.
- Press "i+ (info)", "5", "Volume +" then "TV power" on remote. 2)
- 3) You can see Service Mode on display.
- * The above operation should be finished within 15 seconds after the set go to STBY mode

- 4-3. Change Data by Service Mode 1 (Part A)
- 1. Change Data of "Chassis" or "VPC" service mode
 - Press "2 / 5" on remote to select (up / down) category. a.
 - b. Press "1 / 4" on remote to select (up / down) Item.
 - Press "3 / 6" on remote to change (up / down) data. C.

Save Changing Data by Service Mode 1

- Write data for "Chassis" or "VPC" service mode. 2.
 - Press "Mute" on remote. a. It shows green "SERVICE" changes to green "WRITE".
 - Press "0" on remote. Green "WRITE" changes to b. red "WRITE". It indicate writing is processing.
 - After a while, red "WRITE" changes to green C. "SERVICE". Writing process is done at this point.
- TV reboot is necessary for applying data change. 3.

Save Changing Data by Service Mode 2

Only when B* board is replaced.

- In "Digital" service mode ("002 MODEL" category) 001 SEG Select segment information 002 DEST Select destination information 003 MODELNAME Select Model Name 004 SERIAL Can be set Only Once for the new board 005 SHIP_CONFIRM...Can set correct Product Code 006 VAR_TYPE Select variable information
 - a. Change data for each model. (Refer to 4-4 Part B)
 - b. Press "Mute", "0" on remote sequentially. Red "WRITE" is shown. This indicates writing is in process.
 - c. After a while, red "WRITE" disappears. Green Done will be displayed for a while, which means writing process is done.
 - d. For the items SEG, DEST, MODELNAME after changing each item, service save ("mute"+"0") is required. For the item SERIAL, after inputting the serial number, press key "12" or "Enter" to save the data.
 - Please save the items according to the sequence "SEG -> DEST -> MODELNAME-> VAR_TYPE"
 - When Saving the item "SEG", sometimes instead of "Writing", the word "Pending" will appear. In this case, skip "SEG", saving "DEST", "MODELNAME" and "VAR_TYPE" is OK.
