WARNINGS AND CAUTIONS - ENGLISH

CAUTION

These servicing instructions are for use by qualified service personnel only.

To reduce the risk of electric shock, do not perform any servicing other than that contained in the operating instructions unless you are qualified to do so.

WARNING!!

An isolation transformer should be used during any service to avoid possible shock hazard, because of live chassis.

The chassis of this receiver is directly connected to the ac power line.

CARRYING THE TV

Be sure to follow these guidelines to protect your property and avoid causing serious injury.

- Carry the TV with an adequate number of people; larger size TVs require two or more people.
- Correct hand placement while carrying the TV is very important for safety and to avoid damages.

SAFETY-RELATED COMPONENT WARNING!!

Components identified by shading and ! mark on the schematic diagrams, exploded views, and in the parts list are critical for safe operation. Replace these components with Sony parts whose part numbers appear as shown in this manual or in supplements published by Sony. Circuit adjustments that are critical for safe operation are identified in this manual. Follow these procedures whenever critical components are replaced or improper operation is suspected.

WARNINGS AND CAUTIONS - FRENCH

ATTENTION!!

Ces instructions de service sont à l'usage du personnel de service qualifié seulement.

Pour prévenir le risque de choc électrique, ne pas faire l'entretien autre que celui contenu dans le Mode d'emploi à moins que vous soyez qualifié à faire ainsi.

WARNING!!

Afin d'éviter tout risque d'électrocution provenant d'un châssis sous tension, un transformateur d'isolement doit être utilisé lors de tout dépannage. Le châssis de ce récepteur est directement raccordé à l'alimentation du secteur.

POUR TRANSPORTER LE TÉLÉVISEUR

Tenez compte de ce qui suit pendant l'installation du téléviseur :

- Débranchez tous les câbles avant de transporter le téléviseur.
- Transportez le téléviseur avec le nombre de personnes approprié ; un téléviseur de grande taille doit être transporté par au moins deux personnes.
- Lors du transport du téléviseur, l'emplacement des mains est très important pour votre sécurité, ainsi que pour éviter de causer des dommages.

ALERTE!!

Afin d'éviter tout risque d'électrocution provenant d'un châssis sous tension, un transformateur d'isolement doit être utilisé lors de tout dépannage. Le châssis de ce récepteur est directement raccordé à l'alimentation du secteur.

ATTENTION AUX COMPOSANTS RELATIFS A LA SECURITE!!

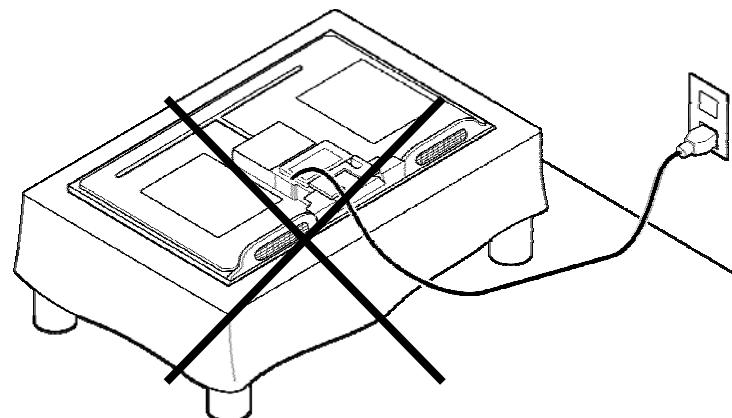

Les composants identifiés par une trame et par une marque ! sur les schémas de principe, les vues explosées et les listes de pièces sont d'une importance critique pour la sécurité du fonctionnement. Ne les remplacer que par des composants Sony dont le numéro de pièce est indiqué dans le présent manuel ou dans des suppléments publiés par Sony. Les réglages de circuit dont l'importance est critique pour la sécurité du fonctionnement sont identifiés dans le présent manuel. Suivre ces procédures lors de chaque remplacement de composants critiques, ou lorsqu'un mauvais fonctionnement suspecté.

USE CAUTION WHEN HANDLING THE LCD PANEL

When repairing the LCD panel, be sure you are grounded by using a wrist band.

When repairing the LCD panel on the wall, the LCD panel must be secured using the 4 mounting holes on the rear cover.

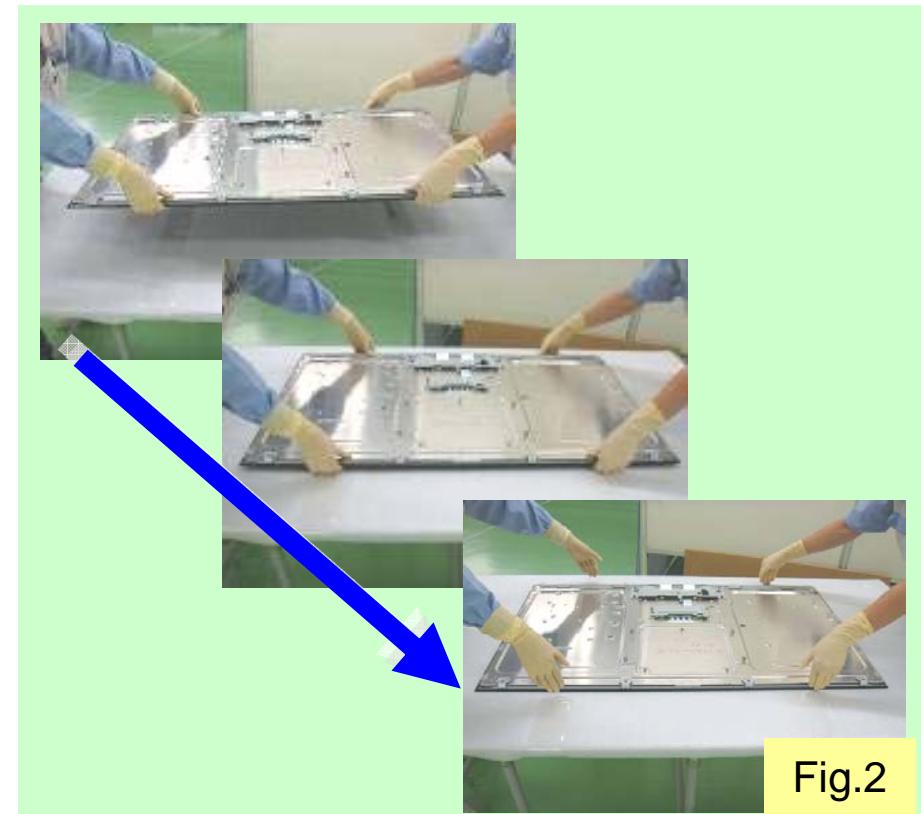

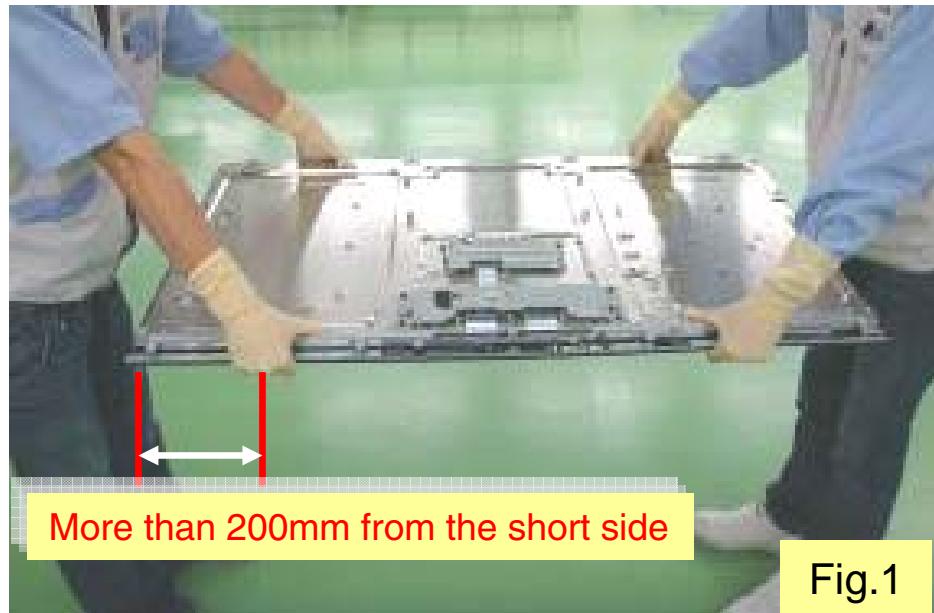

- 1) Do not press on the panel or frame edge to avoid the risk of electric shock.
- 2) Do not scratch or press on the panel with any sharp objects.
- 3) Do not leave the module in high temperatures or in areas of high humidity for an extended period of time.
- 4) Do not expose the LCD panel to direct sunlight.
- 5) Avoid contact with water. It may cause a short circuit within the module.
- 6) Disconnect the AC power when replacing the backlight (CCFL) or inverter circuit. (High voltage occurs at the inverter circuit at 650Vrms.)
- 7) Always clean the LCD panel with a soft cloth material.
- 8) Use care when handling the wires or connectors of the inverter circuit. Damaging the wires may cause a short.
- 9) Protect the panel from ESD to avoid damaging the electronic circuit (C-MOS).
- 10) It is recommended not to exceed 1 hour of Power-On nor Burn-in period with LCD panel face down condition, in repair activity.

HANDLING THE TENGO PANEL

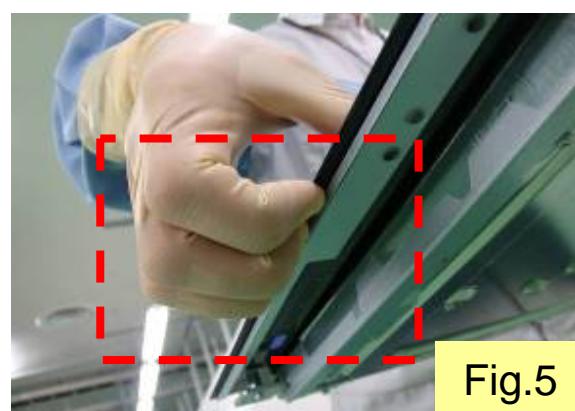

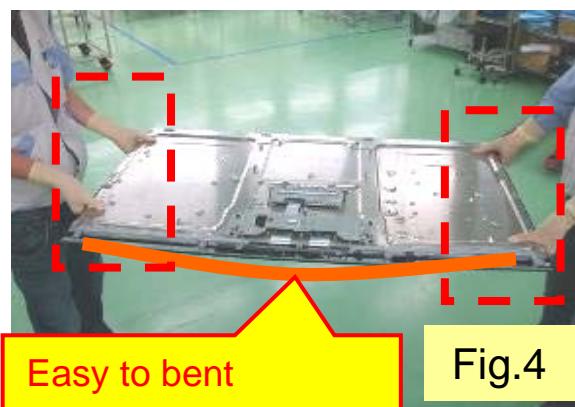

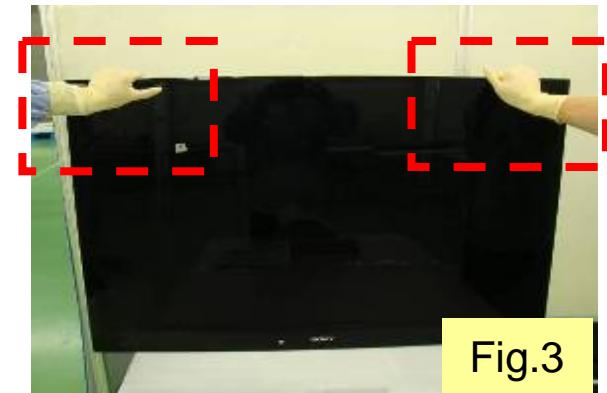

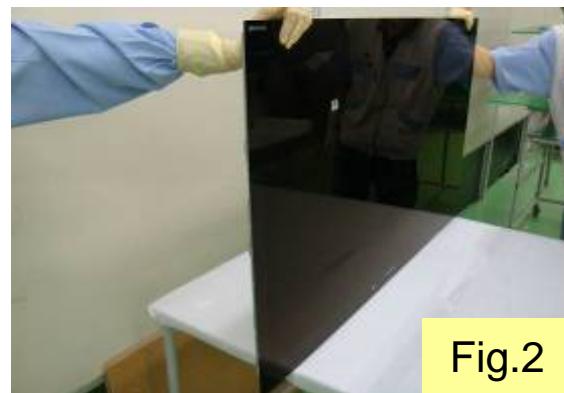

When handling the TENGO panel, please obey the following instructions.

- Please hold the long side more than 200mm from the short side. (Fig.1)
- When you ground Tengo panels beneath, ground it on the level slowly. (Fig.2)

By following handling, resin separation/cracking of glass may be occurred, “restrict” the following items.

1. Temporarily putting on lower cushion with bottom of glass. (Fig.1)
2. Ground with the bottom of glass. (Fig.2)
3. Grip as palm touches glass side. (Fig.3)
4. Hold the short side. (Fig.4)
5. Hold glass only when glass side up. (Fig.5)

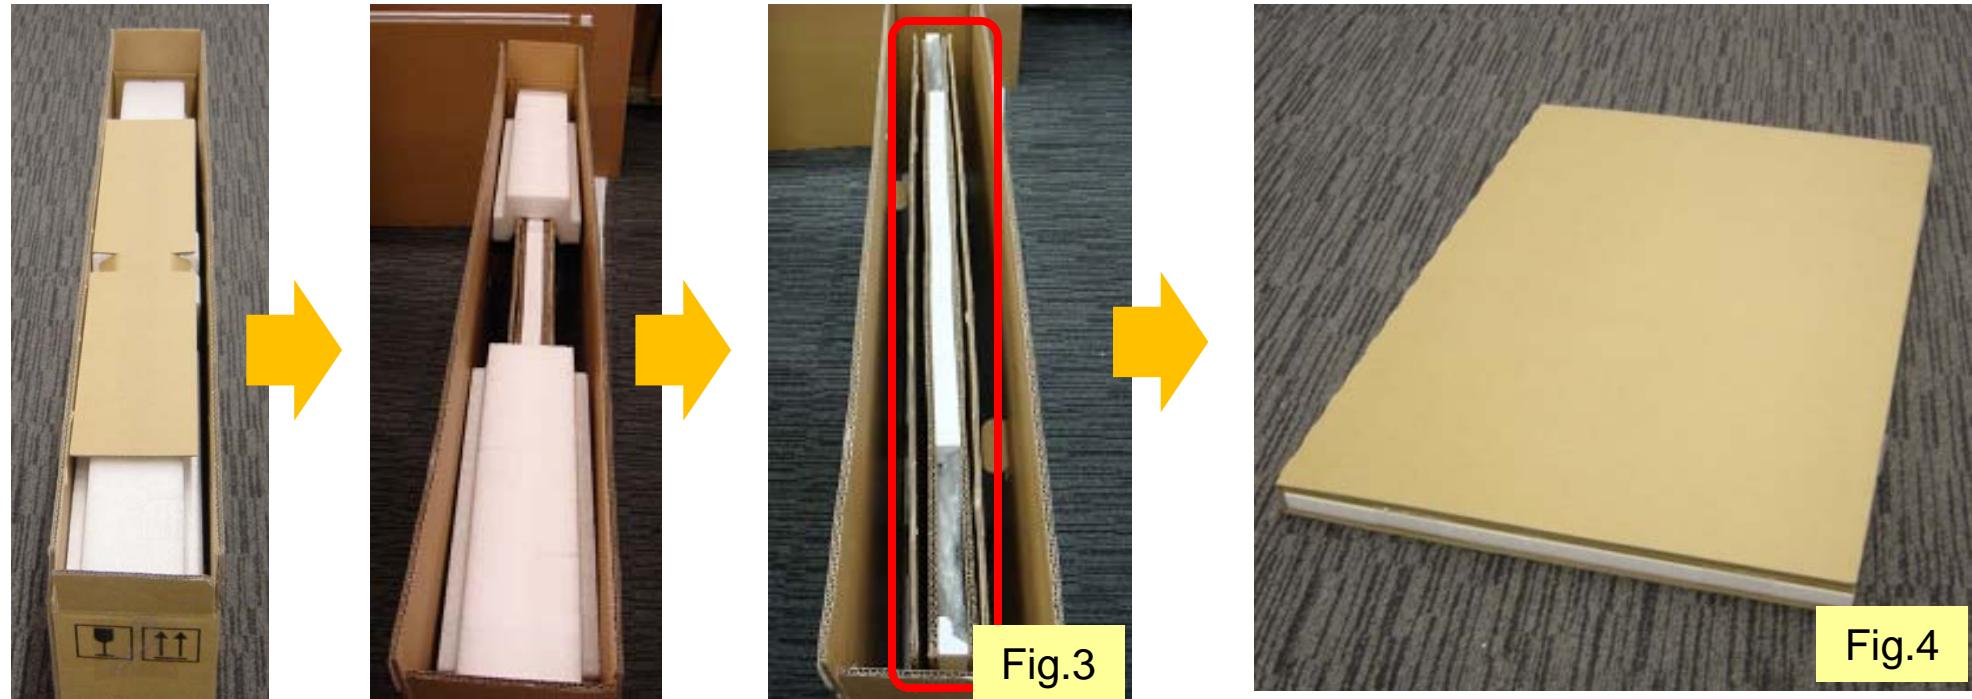

NOTES ON REPLACING THE TENGO PANEL

When replacing the Tengo panel at service, please note the followings.

- Unpack the carton box, pull out the panel with reinforcing plates. (Fig.3)
- Together with reinforcing plates, place the panel with face down slowly. (Fig.4)

* Please use the reinforcing plates as operating table.

When replacing the Tengo panel at service, please note the followings.

- Unpack the package of Tengo panel. (Fig.5)
- Cut protection bag at the center of the back of panel. (Fig.6)

* Please cut the protection bag carefully, the bag will be used for re-packing.

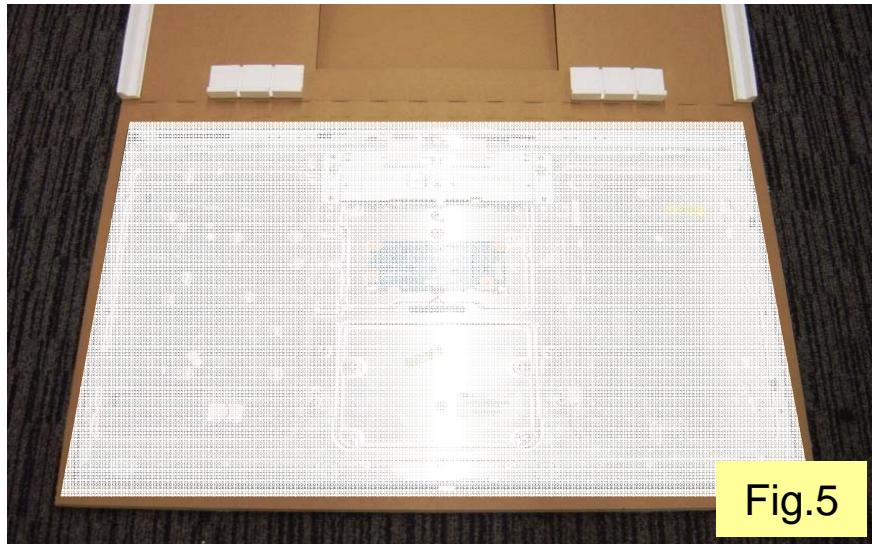

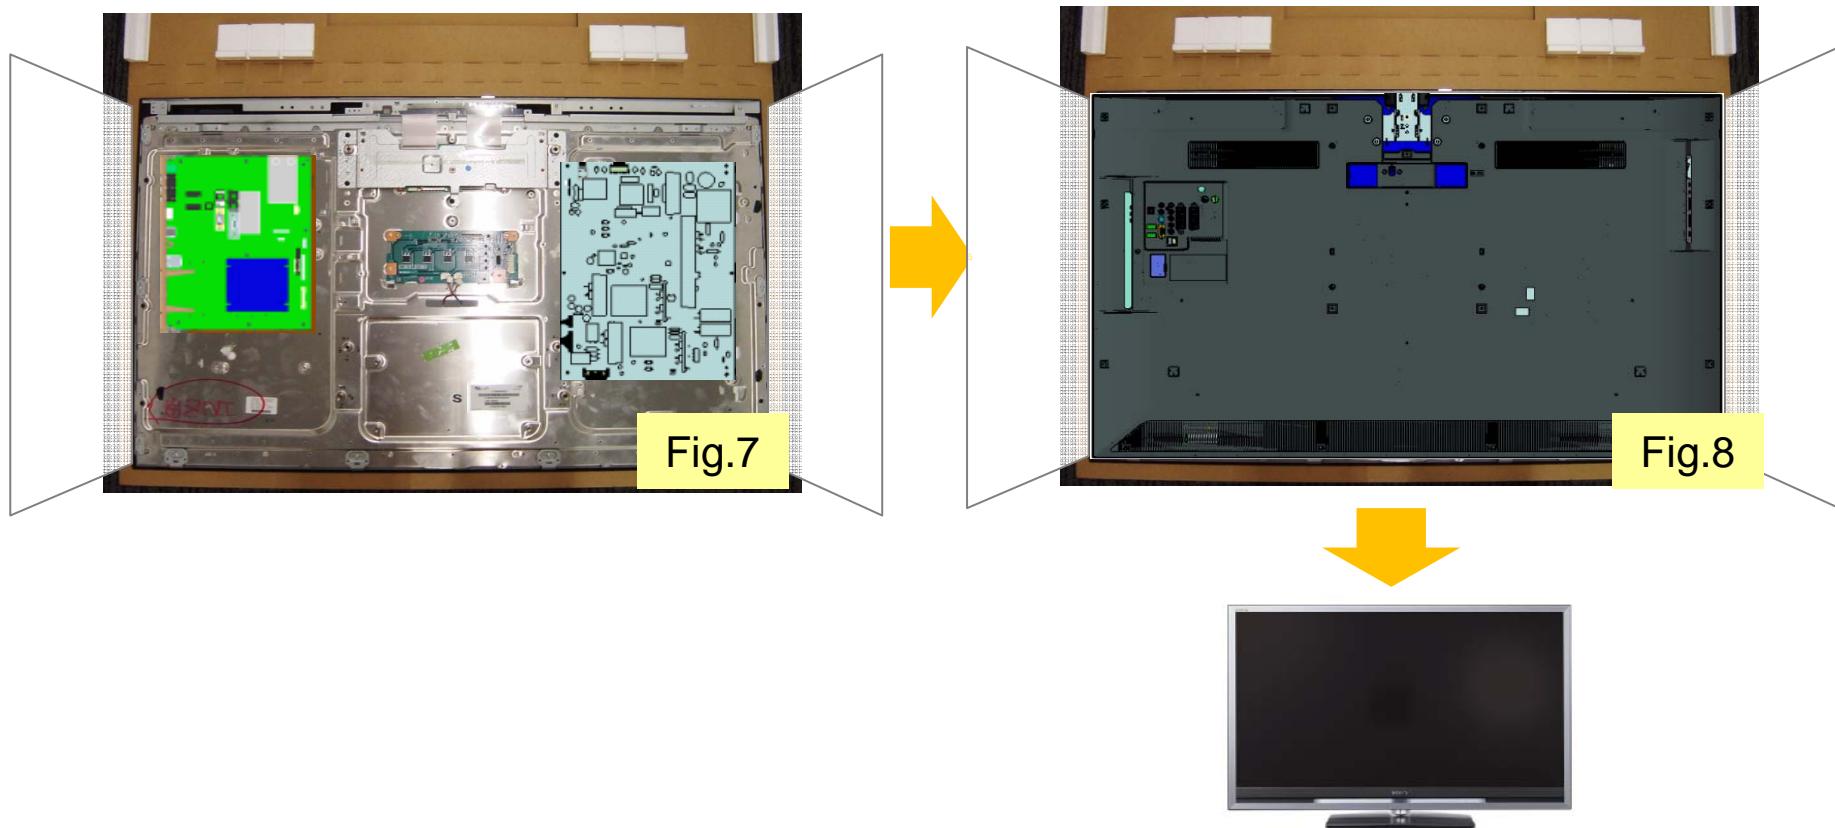

Fig.5

Fig.6

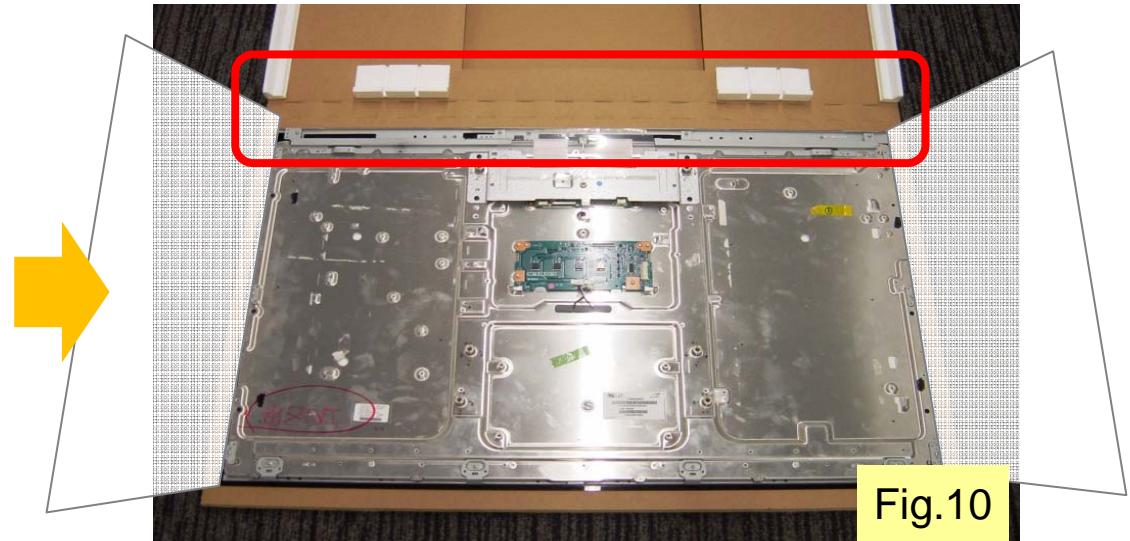

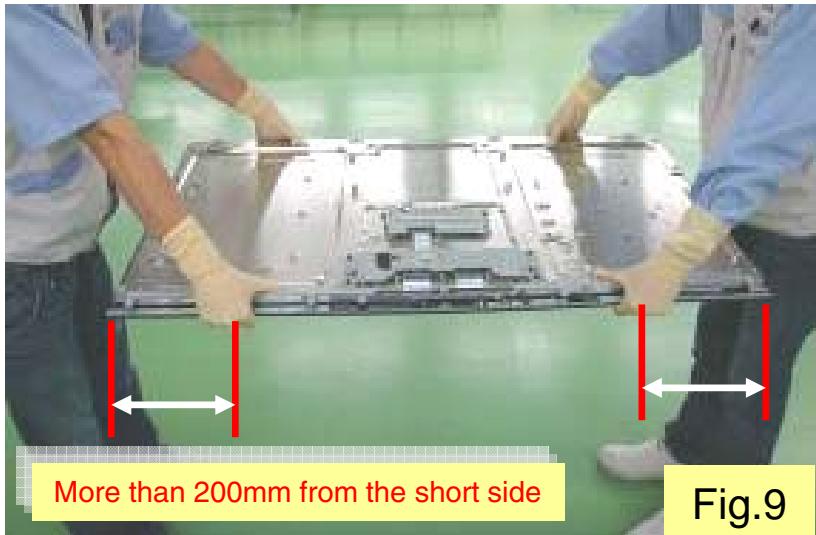

When replacing the Tengo panel at service, please note the followings.

- Assemble TV set with the new panel. (Fig.7)
- After assembly, attach Stand Unit and stand the TV up. (Fig.8)

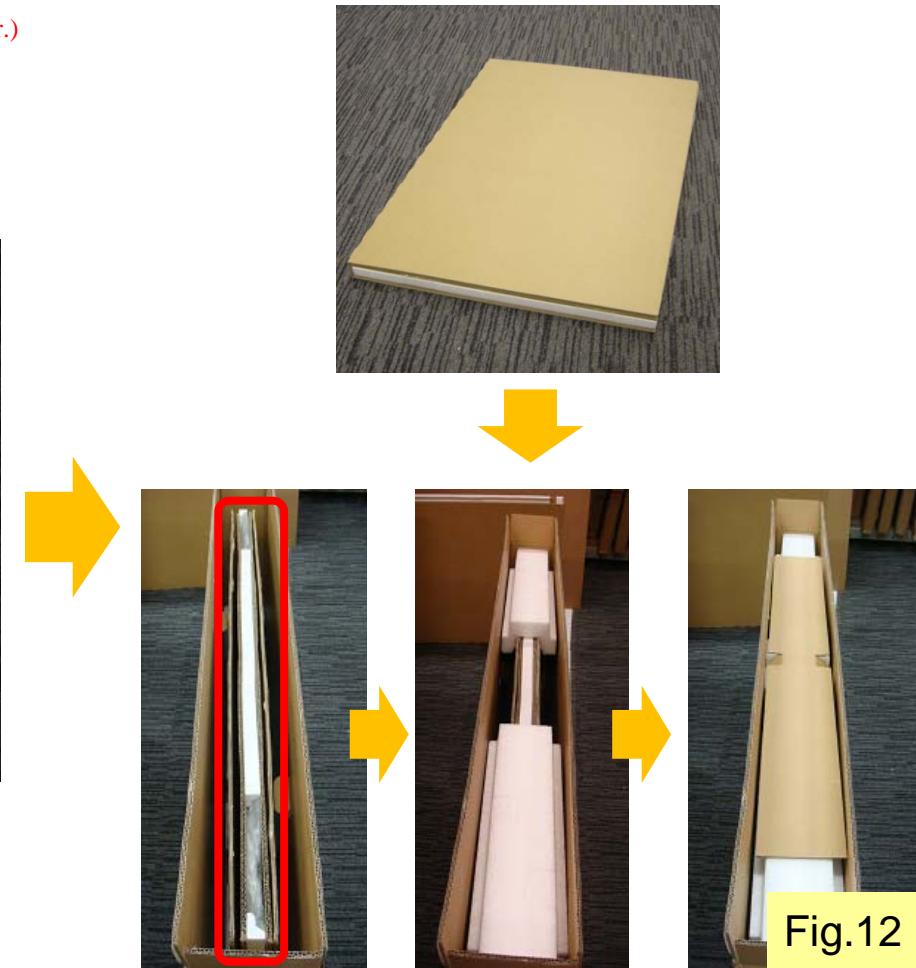

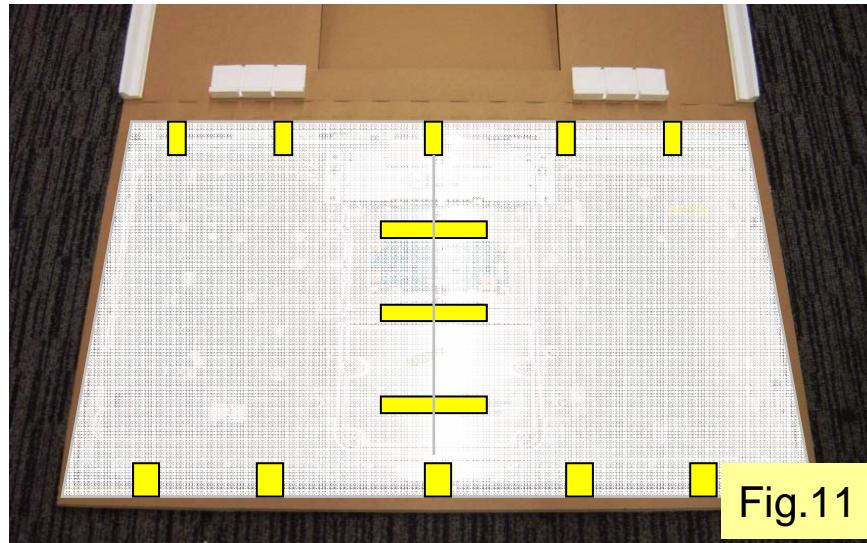

When replacing the Tengo panel at service, please note the followings.

- Set the plastic bag on correct position of package and place the replaced panel on it. (Fig.9)
* Handle the panel carefully as the instruction below.
- Align the bottom side of panel with cushions on the package. (Fig.10)
*** Please note that it may damage to the glass surface if you pack panel in the wrong orientation.**
* Please handle with care to prevent hitting the glass of panel to package materials.

When replacing the Tengo panel at service, please note the followings.

- Tape the plastic bag on the back of panel to protect panel surface. (Fig.11)
- * Please make sure the orientation of the panel again. (T-CON board side is lower.)
- Repack the panel in the original carton box.

HANDLING THE FFC

When you insert / pull out FFC, please grasp a reinforcement board and main body of FFC.

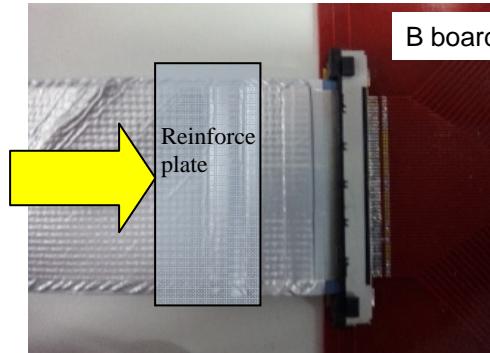

<GOOD>

<NG>

< Insertion >

Please hold reinforcement board and plunge it to the depths.

FFC can reverse insertion to connector of B board.

If reverse insertion FFC, all pins short-circuit, and board is broken.

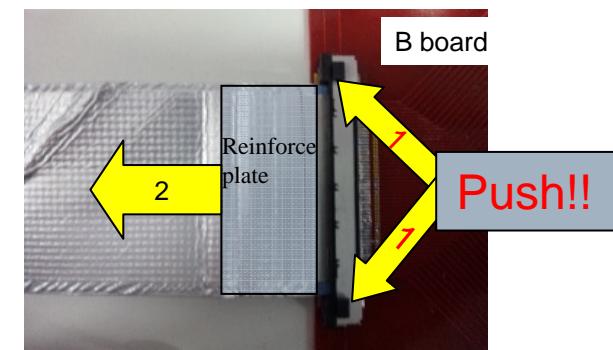

<GOOD>

<NG>

< Pull out >

Please pull out FFC while pushing the button of both ends at the same time.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

1. Check the area of your repair for unsoldered or poorly soldered connections. Check the entire board surface for solder splashes and bridges.
2. Check the interboard wiring to ensure that no wires are “pinched” or touching high-wattage resistors.
3. Check that all control knobs, shields, covers, ground straps, and mounting hardware have been replaced. Be absolutely certain that you have replaced all the insulators.
4. Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
5. Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
6. Check the line cords for cracks and abrasion. Recommend the replacement of any such line cord to the customer.
7. Check the antenna terminals, metal trim, “metallized” knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.
8. For safety reasons, repairing the Power board and/or Inverter board is prohibited.

Leakage Test

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes).

Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instructions.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low voltage scale.

The Simpson's 250 and Sanwa SH-63TRD are examples of passive VOMs that are suitable. Nearly all battery-operated digital multimeters that have a 2 VAC range are suitable (see Figure A).

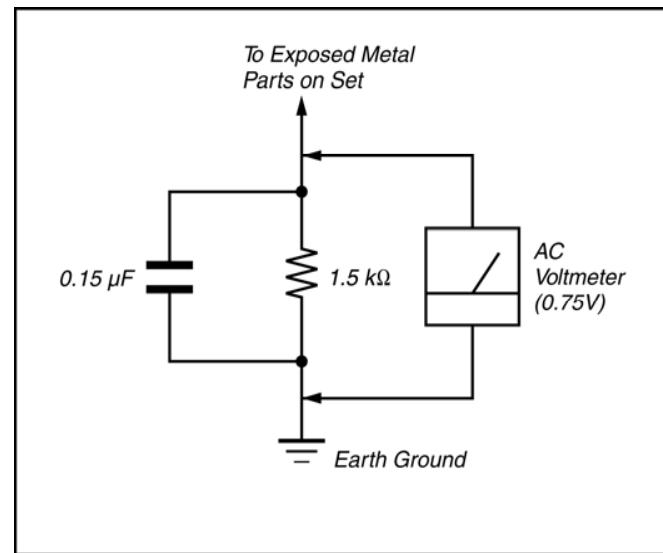

Figure A. Using an AC voltmeter to check AC leakage.

How to Find a Good Earth Ground

A cold-water pipe is a guaranteed earth ground; the cover-plate retaining screw on most AC outlet boxes is also at earth ground.

If the retaining screw is to be used as your earth ground, verify that it is at ground by measuring the resistance between it and a cold-water pipe with an ohmmeter. The reading should be zero ohms.

If a cold-water pipe is not accessible, connect a 60- to 100-watt trouble-light (not a neon lamp) between the hot side of the receptacle and the retaining screw. Try both slots, if necessary, to locate the hot side on the line; the lamp should light at normal brilliance if the screw is at ground potential (see Figure B).

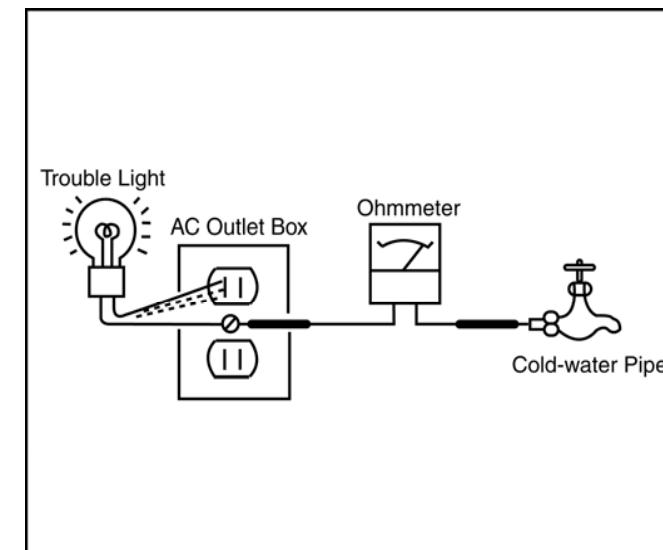

Figure B. Checking for earth ground.

SELF DIAGNOSIS FUNCTION

The units in this manual contain a self-diagnostic function. If an error occurs, the STANDBY LED will automatically begin to flash.

The number of times the LED flashes translates to a probable source of the problem.

A definition of the STANDBY LED flash indicators is listed in the instruction manual for the user's knowledge and reference.

If an error symptom cannot be reproduced, the remote commander can be used to review the failure occurrence data stored in memory to reveal past problems and how often these problems occur.

DIAGNOSTIC TEST INDICATORS

When an error occurs, the STANDBY LED will flash a set number of times to indicate the possible cause of the problem.

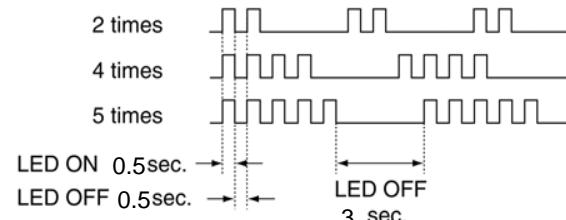

If there is more than one error, the LED will identify the first of the problem areas.

Result for all of the following diagnostic items are displayed on screen.

If the screen displays a "0", no error has occurred .

DISPLAY OF STANDBY LED FLASH COUNT

[FLASH COUNT]

Note: One flash counts is not self-diagnostic.

STBY LED Flash time	Service menu Item name (Screen Display)	Diagnostic Item Description
2	MAIN_POWE	Main Power Over Voltage Protection
3	DC_ALERT	DC_ALERT
	AUD_PROT	Audio Abnormal Detection
4	BALANCER	Panel Balancer Error
5	TCON_ERR	Not used
	HFR_ERR	HFR Error
	P_ID_ERR	Panel ID NVM Error
6	BACKLITE	Back Light Error (Panel Inverter)
7	TMP_ERR	Thermal Error
8	-	Software Error
9	-	Not used
10	EMIT_ERR	Emitter Error
11	-	Not used
12	-	Not used

SELF-DIAGNOSTIC SCREEN DISPLAY

For errors with symptoms such as "power sometimes shuts off" or "screen sometimes goes out" that cannot be confirmed, it is possible to bring up past occurrences of failure for confirmation on the screen:

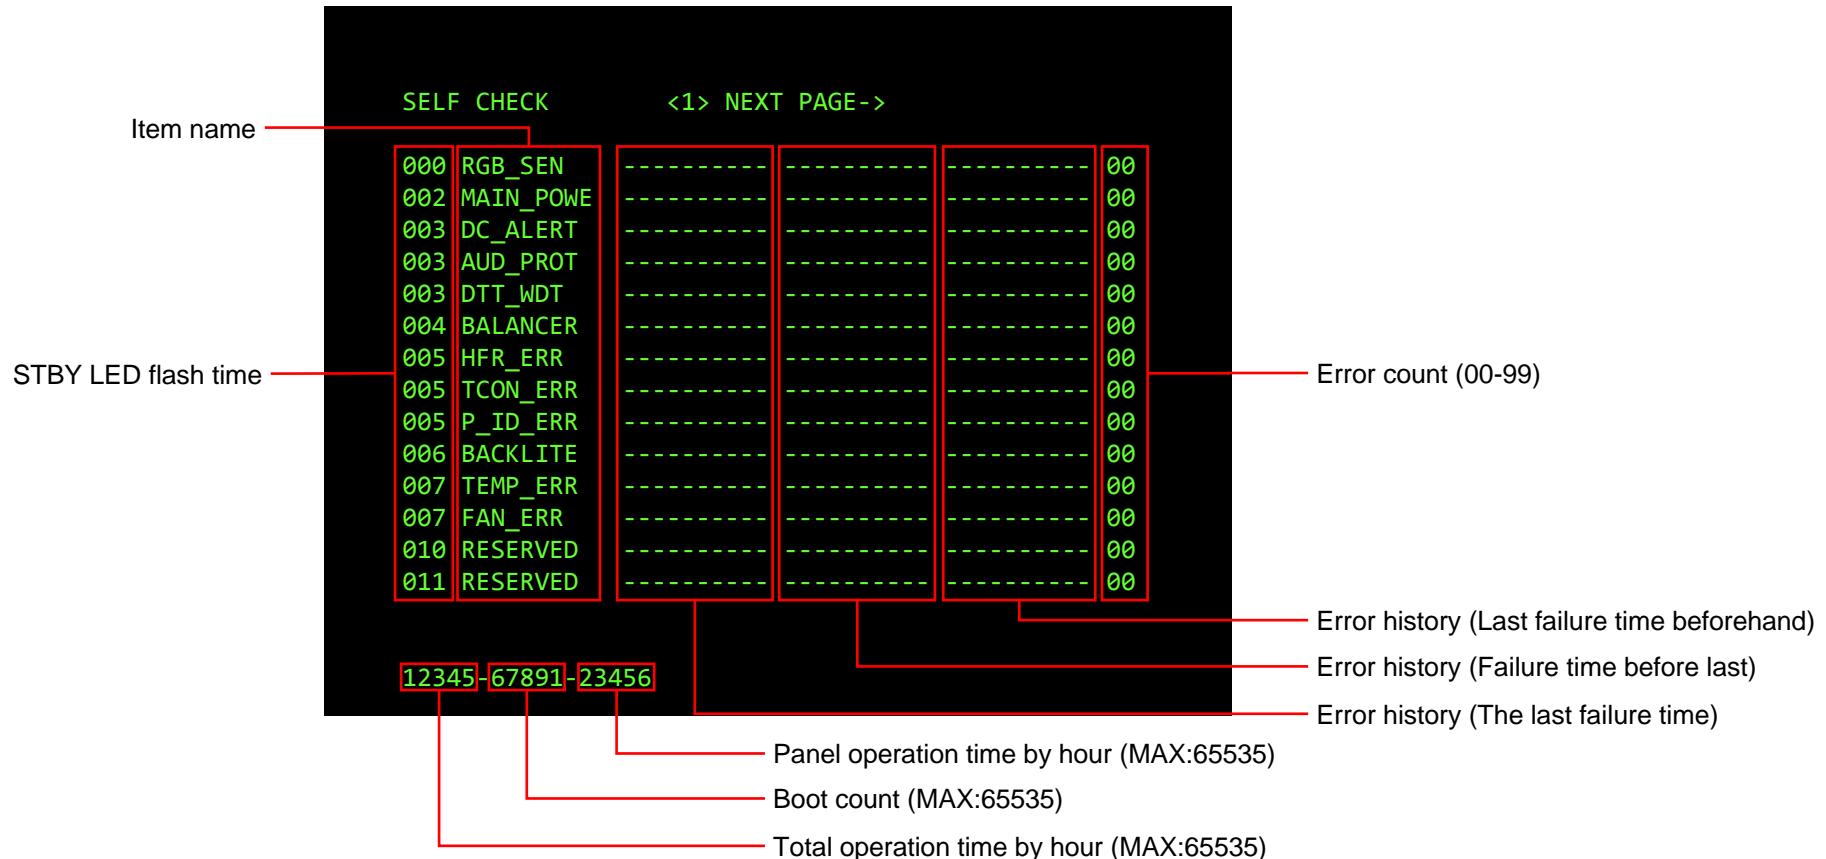

[To Bring Up Screen Test]

In standby mode, press buttons on the remote commander sequentially in rapid succession as shown below:

DISPLAY → Channel 5 → Volume ^{*} [-] → TV POWER

* : Note that this differs from entering the service mode (volume +)

[SELF DIAGNOSTIC SAMPLE SCREEN DISPLAY]

Since the diagnostic results displayed on the screen are not automatically cleared, always check the self-diagnostic screen.

After you have completed the repairs, clear the result display to "0".

Clearing the Self Check Diagnostic List

1. Error history and Error count : Press the Channel 8 => Channel 0 .
2. Panel operation time : Press the Channel 7 => Channel 0 .

Exiting the Self-diagnostic screen

To exit the Self Diagnostic screen, turn off the power to the TV by pressing the POWER button on the remote or the POWER button on the TV.

SEC 1. DISASSEMBLY

- There are clutch in the yellow frame[]. Therefore please be careful in the case of the disassembly or assembly of parts.

Note: When removal rear cover, damaged with rear cover and power supply cord.

Removal the rear cover and power supply cord, please refer to "**APPENDIX-1**".

Note: Metal type Rear Cover is used in these models.

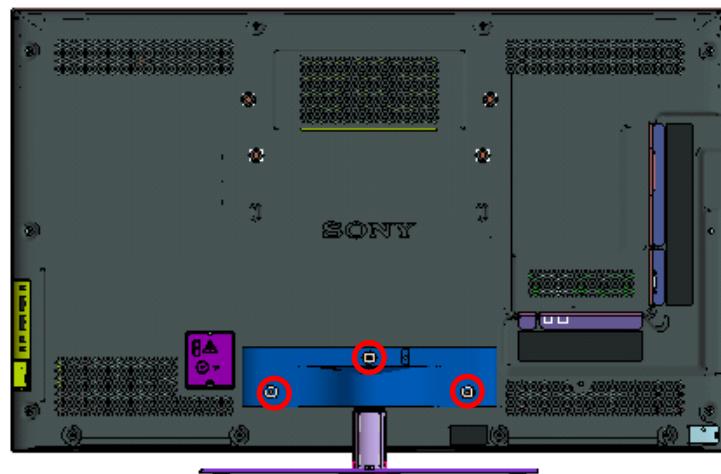

When handle the Rear Cover, please pay special attention to the sharp edges due to no curing finish.

When working, wearing gloves is recommended.

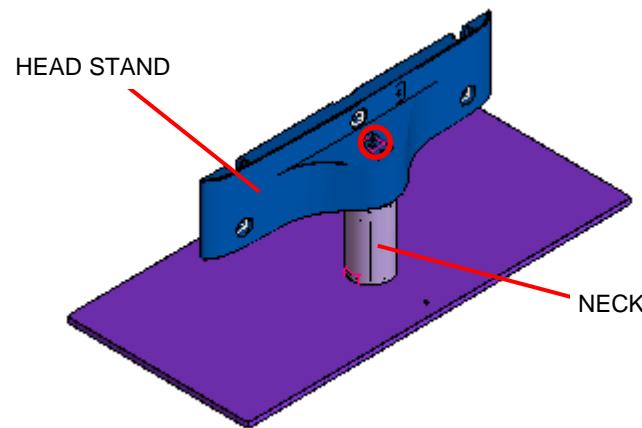

Location of the sharp edges, please refer to "**APPENDIX-2**".

RESTORE WHITE BALANCE / GAMMA ADJ-DATA TO B BOARD

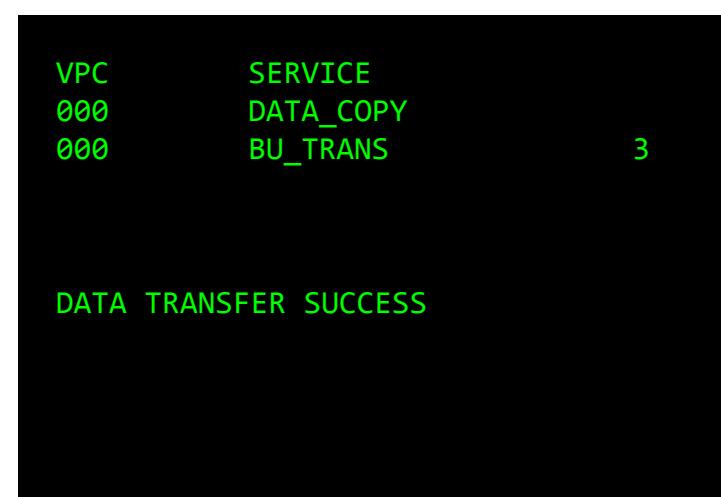

Note: Please apply after USB-DL when B board is replaced.

Change Data of “VPC” service mode.

- a. Select “010 DATA_COPY” category by pressing “2 / 5” on remote.
- b. Change data from “0” to “1” by pressing “1 / 4” on remote.
- c. Wait until data is changed from 1 to 3.
- d. When data is changed from 1 to 3, restoring process is finished.
- e. In case data is changed from 1 to 2, keep default setting. (No more process is needed)

<Restore process>

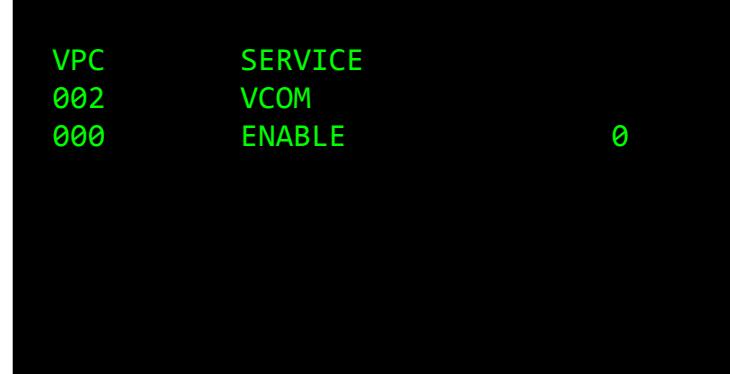

<End restore process>

VCOM ADJUSTMENT (IMPORTANT – Only for S-LCD 60Hz Panels)

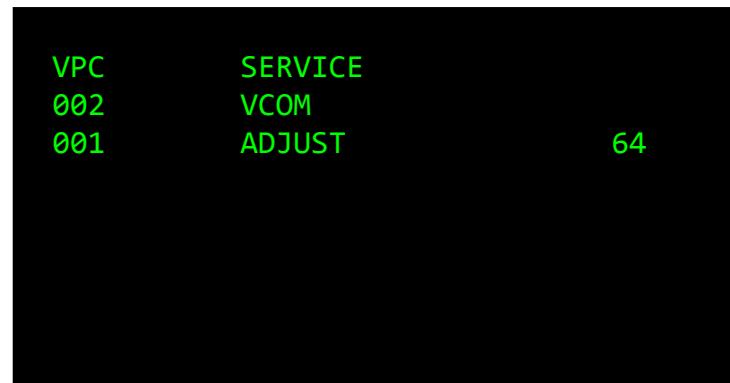

Note: Please execute this adjustment if necessary.

1) Change Data of “VPC” service mode.

- a. Select “002 VCOM” category by pressing “2 / 5” on remote.
- b. Select “000 ENABLE” item by pressing “1 / 4” on remote.
- c. Change ENABLE from “0” to “1” to enable VCOM adjustment.

- d. Select “002 VCOM” category by pressing “2 / 5” on remote.
- e. Select “001 ADJUST” item by pressing “1 / 4” on remote.
- f. Change data by pressing “3 / 6” on remote controller.
- g. Finish the adjustment when the picture seems OK.

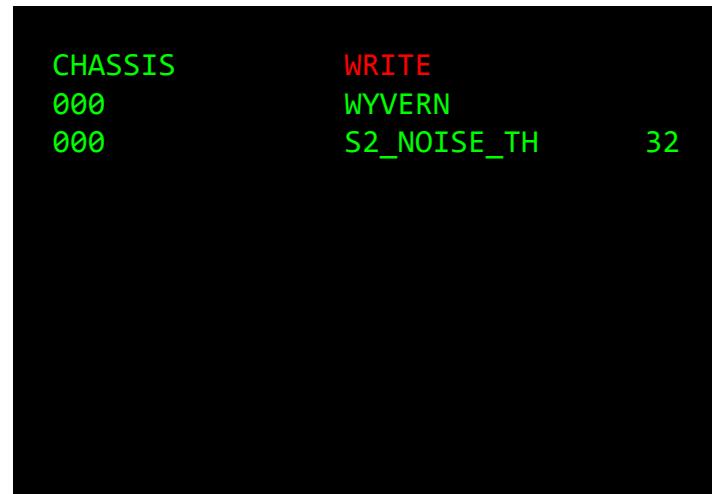

Attention:

- Every time the data changed by pressing “3 / 6” Key, the VCOM pattern will display for 5s and in the mean time OSD will disappear. After the 5s period, VCOM pattern will disappear and OSD will display again.
The 5s time can be adjust by data change.
- If pressing the “3/6” key again during the 5s period, the VCOM pattern display time will be extended to another 5s.

SAVE CHANGING DATA

- 1) Change Data of “**Chassis**” or “**VPC**” service mode
- 2) Write data for “**Chassis**” or “**VPC**” service mode
 - a. Press “Mute” on remote.
It shows green “**SERVICE**” changes to green “**WRITE**”.
 - b. Press “0” or “enter” on remote. Green “**WRITE**” changes to red “**WRITE**”. It indicate writing is processing.
 - c. After a while, red “**WRITE**” changes to green “**SERVICE**”. Writing process is done at this point.
- 3) TV reboot is necessary for applying data change.

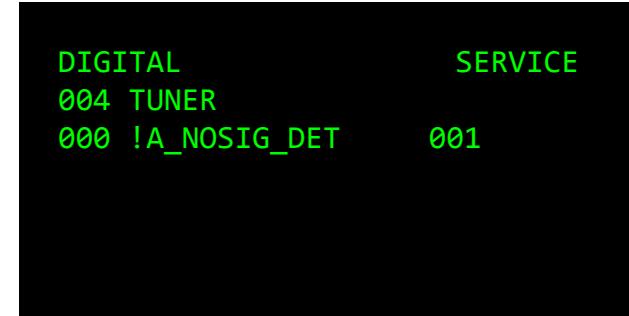

CHANGE DATA

Note: “Digital” service mode don’t have to Save. (except “002 MODEL” and “005 CHAPRESET” category)

1) Change Data of “**Digital**” service mode. (except “003 DIG_SRV_MODE” category)

- a. Press “2 / 5” on remote to select (up / down) category.
- b. Press “1 / 4” on remote to select (up / down) Item.
- c. Press “0 / 10” on remote to select item.

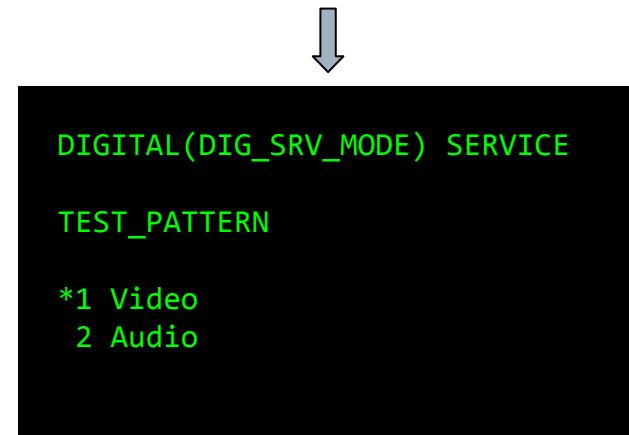

2) Change Data of “**Digital**” service mode. (“003 DIG_SRV_MODE” category)

“003 DIG_SRV_MODE” is one category of “Digital” service mode.

Please note because this operation is special.

- a. Press “2 / 5” on remote to select “003 DIG_SRV_MODE”.
- b. Press “1 / 4” on remote to select (up / down) Item.
- c. Press “0 / 10” on remote to select item.
- d. Press number key “1”~“9” directly. “*” stamp move.
- e. Press “12 / enter / select” to decide and advance next step. Press “return”, when returning on the previous page.

3) Write data for “**Digital**” service mode. (“**002 MODEL**” category)

Note: This procedure operation, when replaced the B board.

Note: Do not write a wrong segment or destination information in Product ID.

When the wrong setting is written, TV may not operate.

000 SEG -----Select JDM code information

001 DEST -----Select destination information

002 MODELNAME ---Select model name

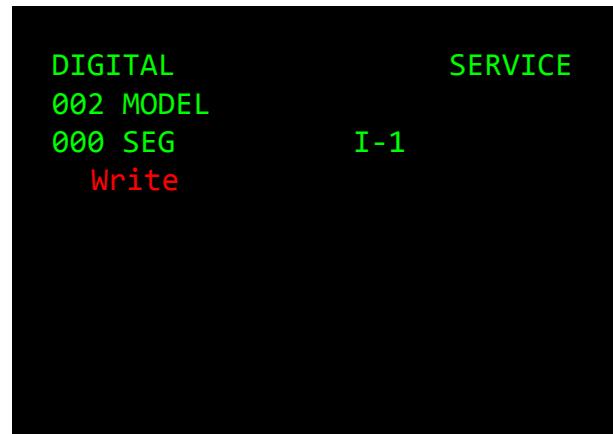

004 SERIAL ----- Can be set only once for the new board

a. Change data for each model.

b. Press “Mute”, “0” on remote sequentially.

It shows red “**WRITE**”. It indicate writing is processing.

c. After a while. Red “**WRITE**” disappears. Writing process is done after a while.

SET TO SHIPPING CONDITION

How to do shipping condition.

- a. Move to “**Digital**” service mode.

Press “8” on remote.

It shows green “**SERVICE**” changes to green “**RST-**”.

Press “mute” on remote.

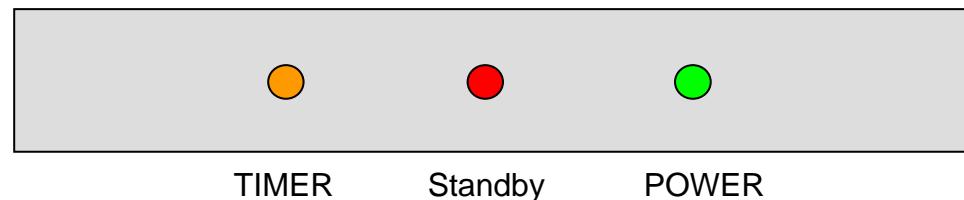

Added green “**EXE**” after green “**RST-**” .

- d. Press “0” on remote. Green “**EXE-RST**” changes to red “**EXE-RST**”. It indicate writing is processing.

After a while, red “**EXE-RST**” changes to green “**SERVICE**”.

And all LED lights.

Writing process is done at this point.

<Another way>

You can set to shipping condition w/o entering Service Mode.

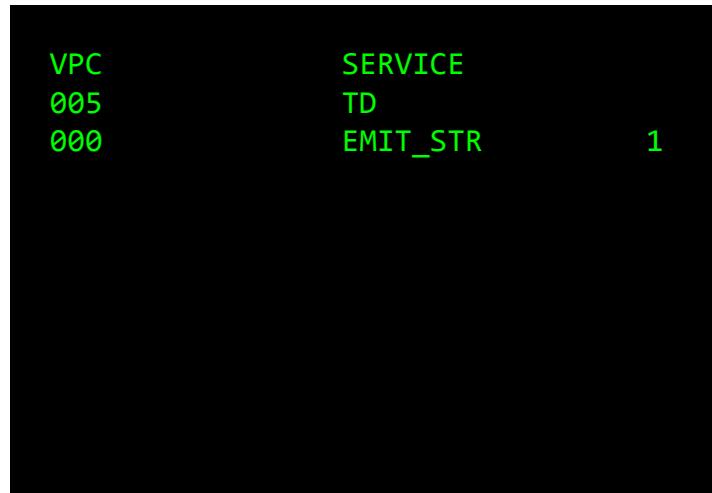

-> “Cursor Up” on remote + “Power Key” on Front panel.

CHANGE THE EMITTER OUTPUT LEVEL

Note: To reduce the emitter LED output power strength.

Change Data of “VPC” service mode

- a. Select “005 TD” category by pressing “2 / 5” on remote.
- b. Select “000 EMIT_STR” item by pressing “1 / 4” on remote.
- c. Change data from “0” to “1” by pressing “3 / 6” on remote.
0: Strong (Default)
1: Weak
- d. Save by pressing “Mute” + “0” or ”10” & Reboot.

HDD REC SETTING

1) Key Copy

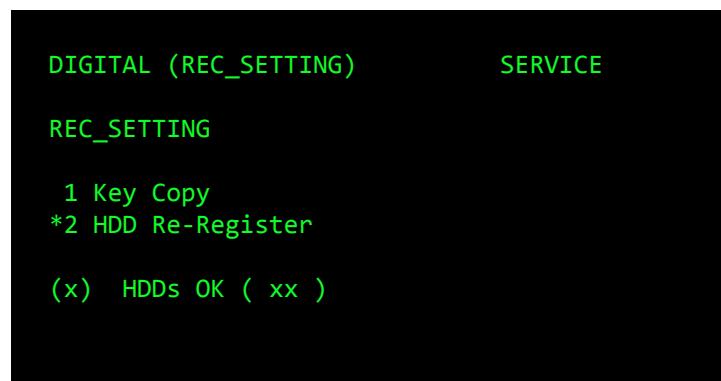

Change Data of “Digital” service mode

- a. Select “003 DIG_SRV_MODE” category by pressing “2 / 5” on remote.
- b. Select “006 REC SETTING” item by pressing “1 / 4” on remote.
- c. Press “0” or “10” to go to detailed REC Setting screen.
- d. Press “1” to select “Key Copy” item.
- e. Press “Enter” or “12” twice to execute the command.
- f. If OK, show the message “Key Copy OK”
If NG, show the message “Key Copy NG (= xx)”

2) HDD Re-Register

- a. Press “2” to select “HDD Re-Register” Item.
- b. Press “Enter” or “12” twice to execute the command.
- c. If OK, xx=x+1
If NG, xx=x

APPENDIX-1

PROCEDURE TO REMOVE THE REAR COVER

1. Remove the screws from the REAR COVER and the COVER AC.
2. Open the REAR COVER with the “COVER AC” and AC cable attached.

Note: Make sure to hold the cable not to give any tension to the connector and scratch damage for the cable.

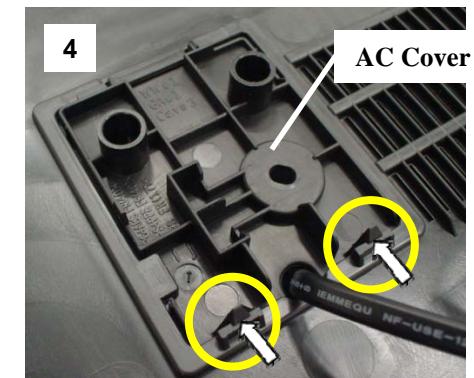

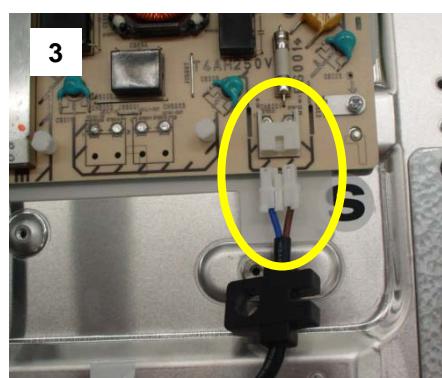

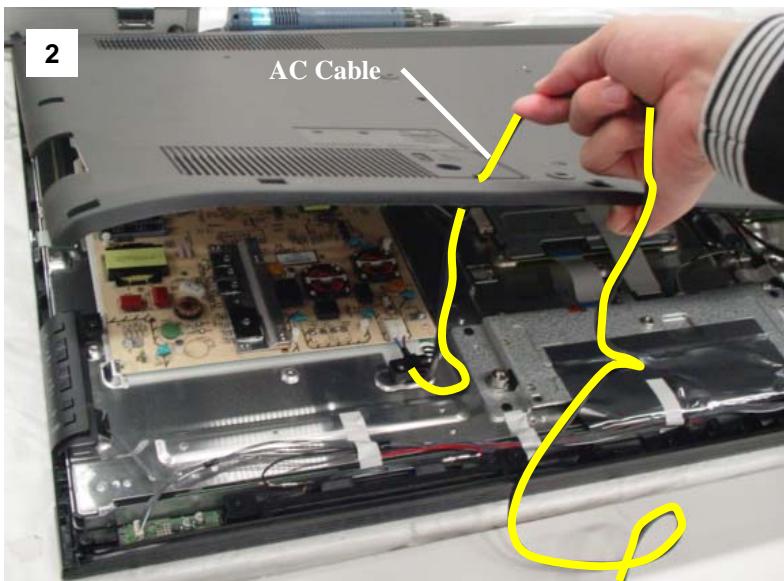

3. Release the AC cable connector.
4. Release the hooks of the COVER AC and remove it.

Note:

Take care not to cut your hands when releasing the hooks, especially on the metal RC.

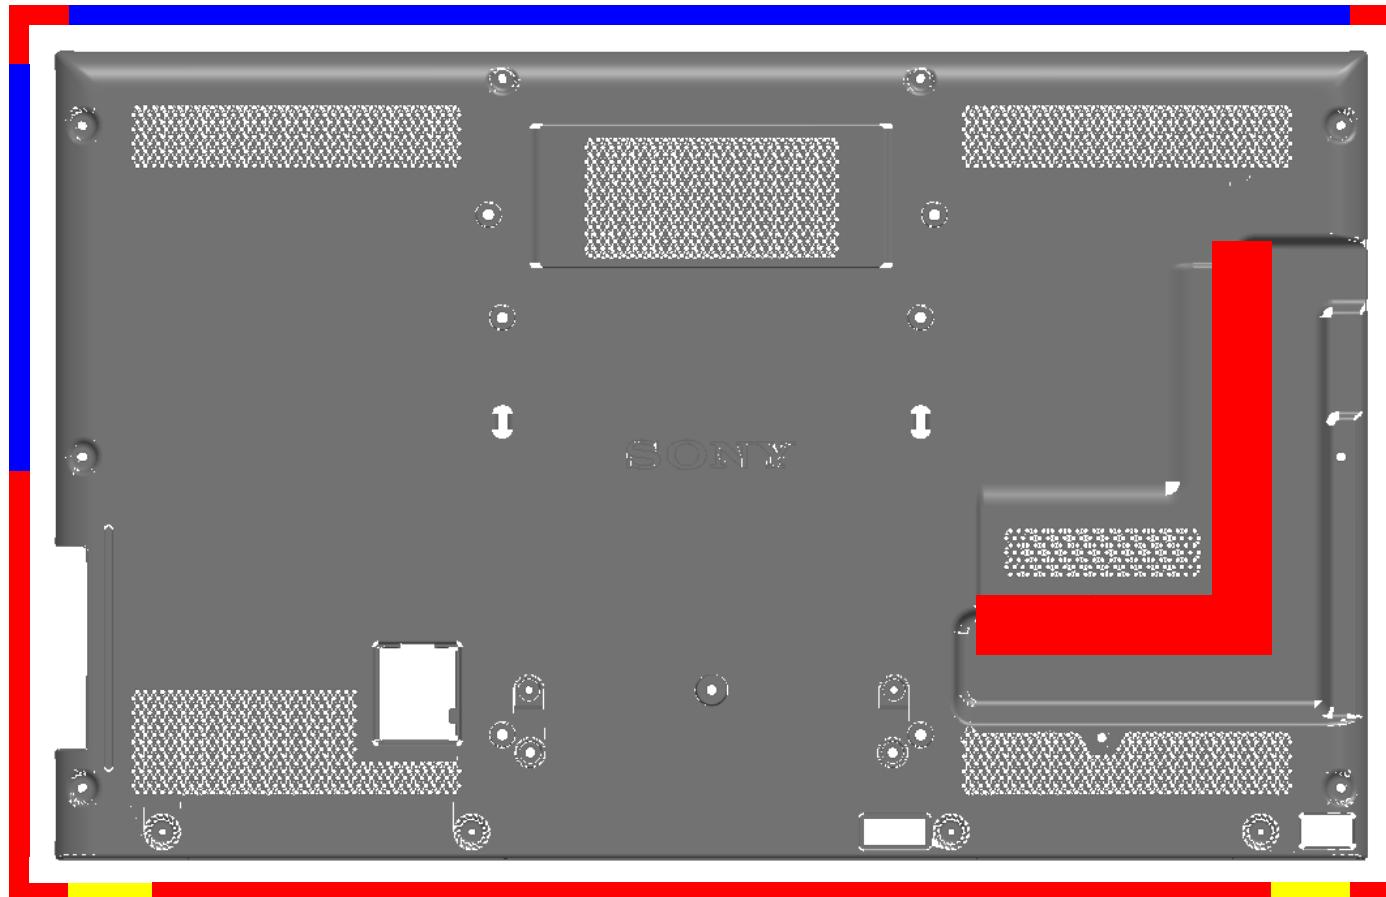

Confirm the hooks are not broken before re-using the COVER AC.

If the hooks are broken please replace with a new one.

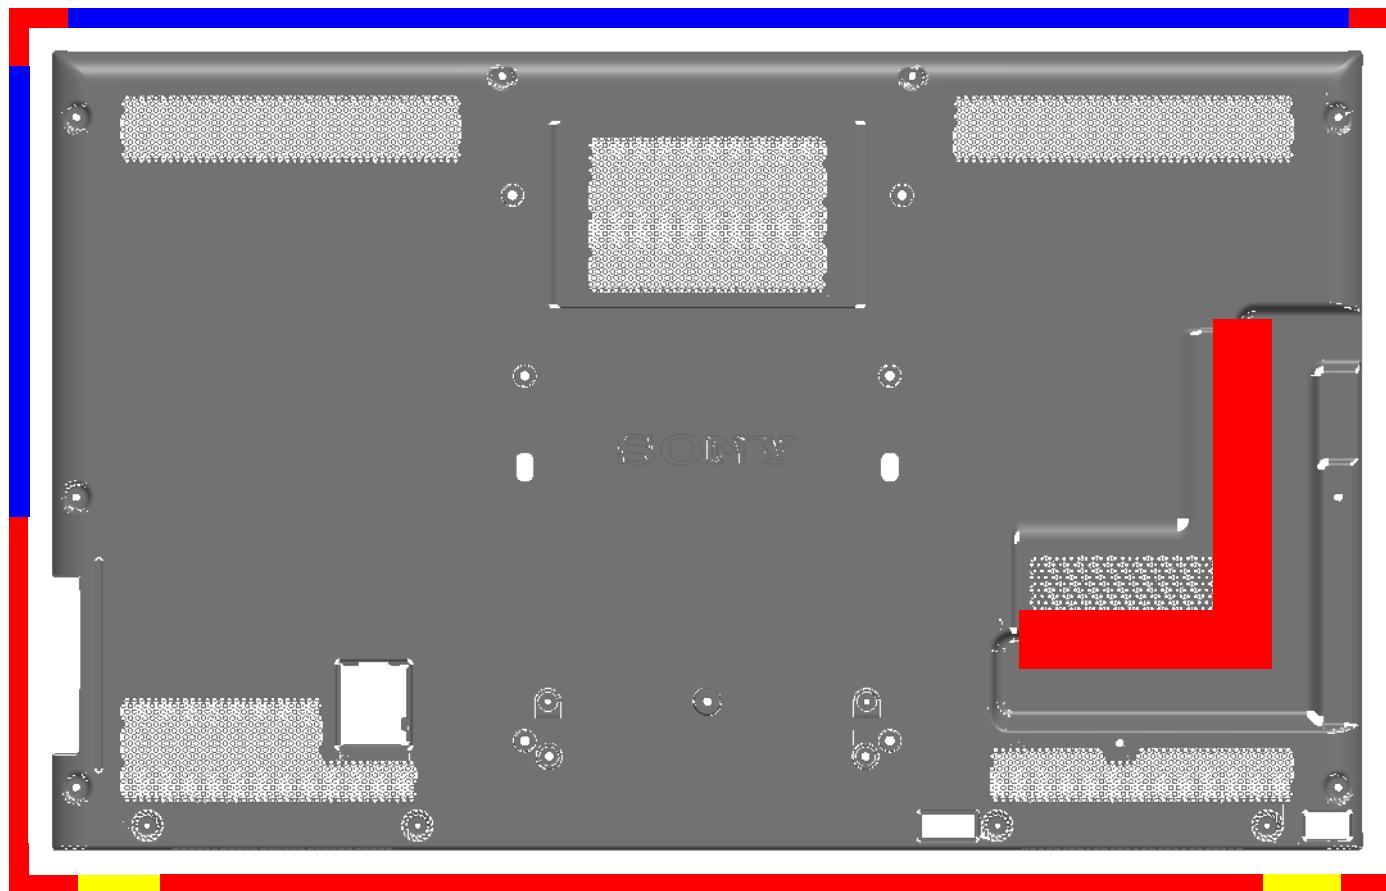

APPENDIX-2

CAUTION FOR THE SHARP EDGES OF THE REAR COVER(40)

- OK to grab
(curling area)
- OK to grab with care
(sharp edge area)
- NG to grab
(sharp edge and
easy to deform.)

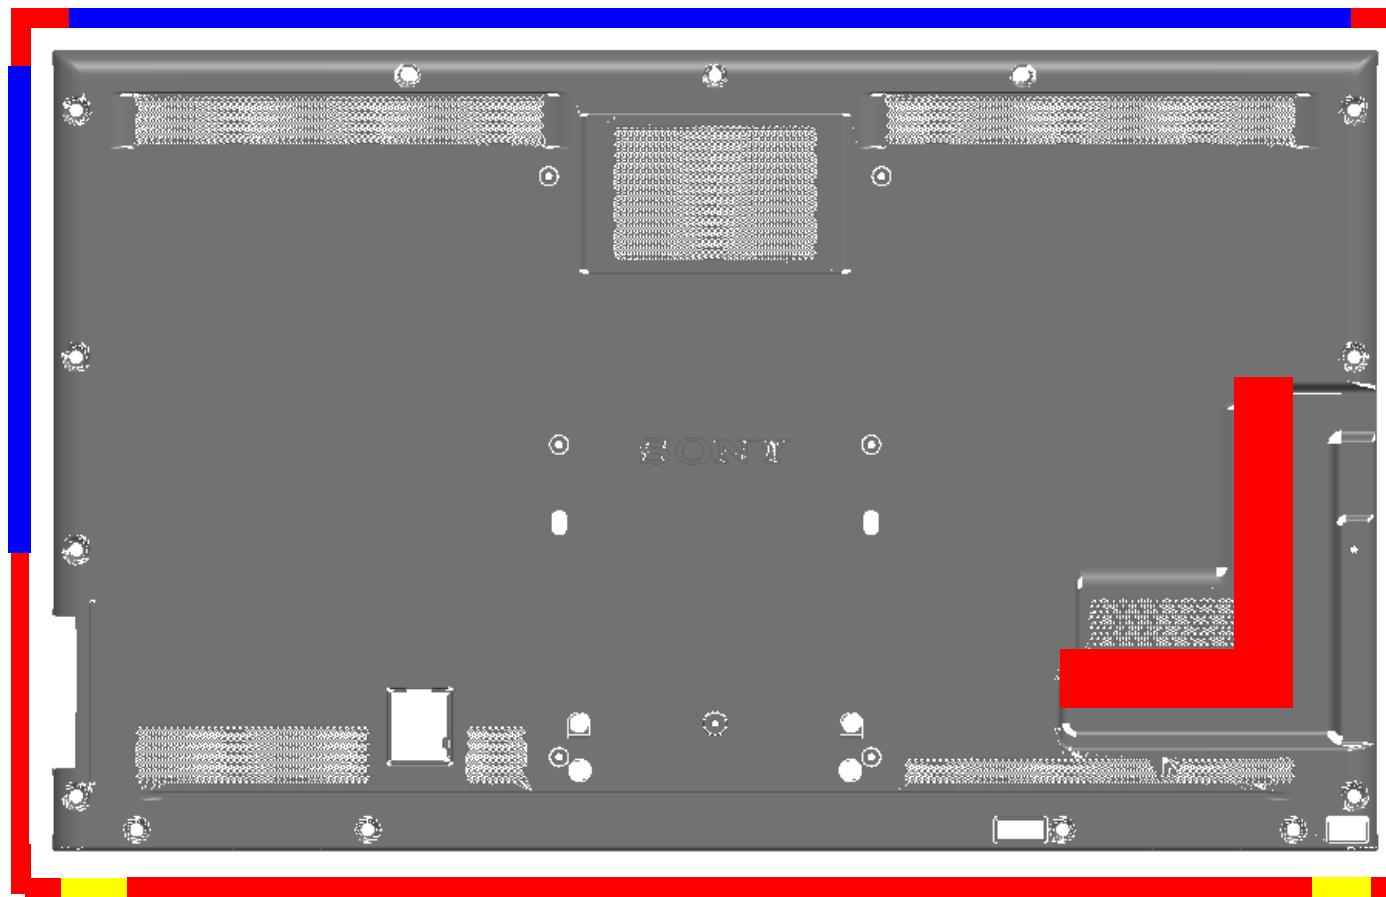

CAUTION FOR THE SHARP EDGES OF THE REAR COVER(46)

■ OK to grab
(curling area)

■ OK to grab with care
(sharp edge area)

■ NG to grab
(sharp edge and
easy to deform.)

CAUTION FOR THE SHARP EDGES OF THE REAR COVER(55)

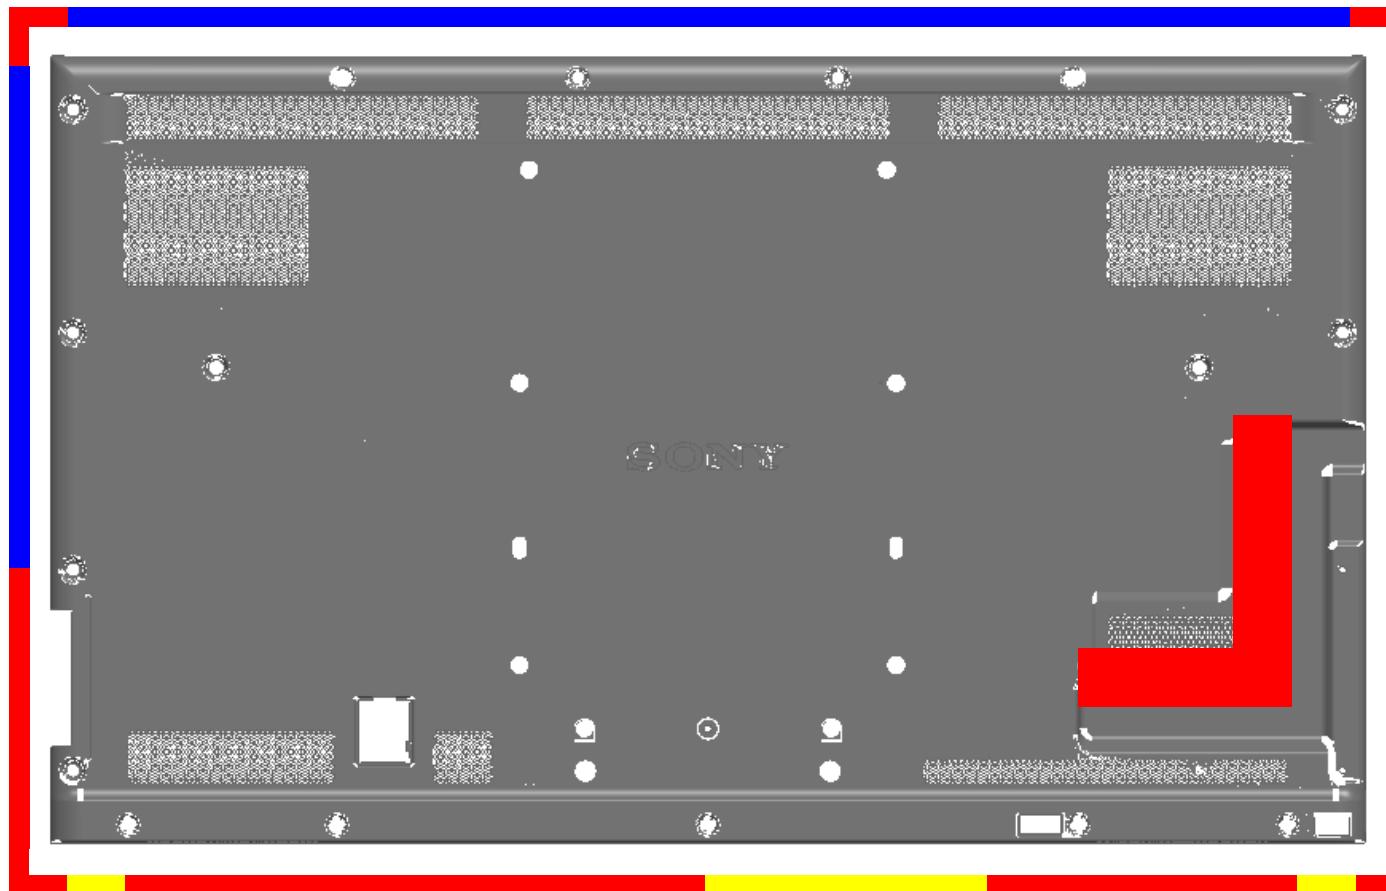

OK to grab
(curling area)

OK to grab with care
(sharp edge area)

NG to grab
(sharp edge and
easy to deform.)

CAUTION FOR THE SHARP EDGES OF THE REAR COVER(60)

OK to grab
(curling area)

OK to grab with care
(sharp edge area)

NG to grab
(sharp edge and
easy to deform.)
